

Environmental Statement

Mincey Marble has taken the first steps in becoming an environmentally conscious company by introducing, incorporating, exploring and encouraging our employees and suppliers to become more environmentally pro-active. We have begun putting into place a step-by-step program designed to minimize our environmental impact by planting trees around our facility, reducing our VOC emissions, utilizing cubicles made from 100% recycled material, making our facility non-smoking, expanding our recycling program, adding low voltage lighting, incorporating a water system that heats on demand, and utilizing recyclable materials to package and ship our cast marble. Our employees are encouraged to participate in and promote these efforts throughout the company and to be environmentally responsible in their private lives. We truly believe that even the smallest step will make a big difference.
